

REFERENCE STATEMENT

To Whom It May Concern,

Levi and Ashley Clark of Hybrid Steel Design were contractors on our food grade pulse crop processing plant. There was a great deal of stainless steel used in this project which Levi was very proficient in welding and finishing each part in the project. Our project required a great deal of on-site fabrication. Levi is very talented and creative when resolving fabrication issues. His work is meticulous. Levi is very professional, communicates very well, and is an ambitious perfectionist. The people he had on his crew were professional and had great demeanors as well. The billing was always accurate, fair, and accountable.

If you are considering a contractor, I would strongly recommend Hybrid Steel Design. Please call me if you have any questions at 406-229-0386.
